

NAILS

We sell fewer nails nowadays, as most carpenters prefer to use screws and cordless screwdrivers. British nail manufacturers have all but disappeared under competition from China and Russia. It is a shame to see nails used so rarely as they can still provide a quick and strong means of fixing, especially when galvanised nails are used dovetailed on glued joints. Due to low margins on nails and their high weight/value ratio, we are unable to offer free carriage on these products.

Bright Round Wire Nails A general purpose nail with many uses. The 100 mm* have a galvanised surface which not only prevents corrosion, but also improves the grip and provides a very secure fixing. For even stronger grip, we suggest using annular nails as an alternative.

WIGGLE PINS

Corrugated Fasteners [Wiggle Pins]

A quick fixing for a simple butt joint of two pieces of wood. Butt the pieces together and hammer in the corrugated fasteners, they are usually 'dovetailed' for strength.

When making scenery flattage using these, it is advisable to use a triangular plywood 'plate' over the back of the joint, glued and pinned for extra strength. This method is often referred to as 'Dog and Biscuit'.

Corrugated Fasteners	code	box of 1,000

POWERED STAPLERS

DOWELS

Star Dowels Useful as an economical method of securing mortise and tenon joints while the glue is drying. These fixings are considerably faster than draw pegs although nothing beats the durability of tapered wooden pegs driven through offset holes. Regrettably draw pegged joints seem to be a dying art. I'll shut up now.
