

ROSco SUPERSATURATED PAINT

Our biggest selling range of scenic paint.

Rosco Supersaturated Paint Specifically designed to offer the scenic artist a matt non-reflective medium that can be used indoors or outdoors. It will adhere to most modern scenic surfaces, the acrylic base ensuring that it will not crack. The paint is

conveniently packaged in a concentrated form that saves storage space. This can be particularly helpful for freelance scenic artists who may need to transport a wide range of colours in their car. The paint provides the versatility of dry pigment with the permanence, ease of use and flexibility of acrylics.

Rosco Supersaturated Paints can be used direct from the pot for maximum obliteration, but they are really designed to be diluted at least 1:1 with water. They can be further diluted up to 15:1 to provide watercolour washes and dye effects. If you are heavily diluting the paint but want to use it on a difficult surface we advise that Rosco Neutral Base is added to reinforce the binding power. Indeed Neutral Base [see page 1.07] can be added to Supersat to paint items such as brass door furniture where most paints would fail to adhere. When used to paint cloths, Supersat has the advantage over other paints in that it remains supple allowing the cloth to be rolled or folded without cracking. It is this flexibility that makes Rosco Supersat the preferred choice of virtually every major theatre paint shop. The paint can be easily flameproofed by the addition of Rosco Flamex PA [see page 1.41]. Once diluted 1:1 the paint will cover approximately 8-10 square metres per litre making it very good value. Rosco shade cards are available.

ROSco SUPERSATURATED STARTER KIT

Starter Kits These kits are ideal for painting stage models in the preferred paint of scenic artists. Contains 28 x 28g pots including one pot of all the colours shown plus black and white.

Each small pot will cover around .25 square metres.

ROSco WHITE BASE AND VELOUR BLACK

White Base A concentrated vinyl acrylic emulsion with a titanium dioxide filler. For priming new canvas dilute in ratio 2:1 water to base, which will give a good surface to take colour etc. A 6:1 prime will create a more absorbent surface for water colour effects, while 1:1 should be used to prime old paint surfaces. Coverage 8-10 square metres per litre.

Velour Black Use in the same way as the supersaturated paints. When diluted 1:1 it will provide an intense matt black permanent velvet finish. In Flint's tests Rosco Velour Black proved to be one of the blackest paints available with the advantage of remaining flexible and strong. It can be further diluted like the other supersaturated paints. Coverage 8-10 square metres per litre.

ROSCO OFF BROADWAY PAINT

Rosco Off Broadway

Rosco's biggest selling paint range in America but in the UK it is used far less than the Super Saturated range despite its economical price. This versatile matt vinyl acrylic paint may be used on a variety of surfaces. Off Broadway is available in the full range of scenic colours plus some highly effective water based metallics. It is ready to use

straight from the pot or may be diluted with water to stretch your budget. Off Broadway is ideally suited to educational establishments. Coverage 8-9 square metres per litre.

ROSCO OFF BROADWAY STARTER KIT

Off Broadway Starter Kit Ideal for painting scenic models, props or small murals. Each pot will cover .25 square metre.

COLORCOAT

For accurate colour matching please use starter kits as Rosco Colour Cards no longer use real paint.

ROSCO COLORCOAT PAINT

Colorcoat is a durable waterborne modified acrylic enamel to provide superior adhesion and abrasion resistance. It can be used on most interior and exterior surfaces where maximum durability is required. Not suitable on soft or flexible substrates. Flat black Colorcoat is widely used by theatre engineering shops as a safer alternative to priming steel with etch primer. During Flints sampling we were highly impressed with Colorcoat's adhesion to aluminium. We would recommend this product as a substitute to two pack primers, for painting aluminium truss and lighting bars, especially for painters keen to avoid solvent laden paints. It is water-based, so brush cleaning is easy. Rosco recommend Colorcoat for use on floors and scenery which endure heavy handling. Clear Colorcoat can also be used as a heavy duty sealer over all Rosco paints. Coverage 7-8.5 square metres per litre. [See page 1.20 for Metal Primers and page 1.17 for Breakthrough.]

Rosco Fluorescent Paint Vivid vinyl acrylic colours that will fluoresce under ultraviolet or black light. Invisible blue is milky under normal light and fluoresces light blue. Intermixable with the Off Broadway range it will brighten these colours. For maximum effect fluorescents are best applied onto a white surface and may be used to paint virtually any substrate including canvas, wood, plaster, various plastics and metal. Coverage 8-9 square metres per litre.

ROSCO CLEARCOLOUR

ClearColour is a clear drying, invisible fluorescent paint. When viewed under normal light they are clear, yet under ultraviolet light these UV activated paints come to life. ClearColour's flexible vinyl acrylic binder allows these paints to be used on virtually any surface. They are water-based with a flat finish. May be thinned up to 1:1 with water [but this will somewhat reduce the fluorescent output]. Best used on light coloured substrates. Milky colour when wet but dries clear, do a test sample first to ensure clarity. Do NOT use on plastic. The plastic will absorb the paint, making it impossible to remove. Coverage approximately 4.9 square metres per litre. See page 3.5 for more details.

A note on fluorescent paints.

To make really vibrant colours the manufacturers must use very pure pigments without bulking agents or fillers. For this reason the obliteration power of all fluorescent paints is poor so we highly recommend using a white basecoat.

ROSCO VIVID FX FLUORESCENT PAINT

Vivid FX A remarkably vivid range of clean and pure colours that bring a new depth to fluorescent paints, with colours so intense that they give an extra dimension to your designs. The range contains 13 colours, which can be intermixed to obtain intermediate colours. They can be used on most scenic surfaces with one or two coats. As with all fluorescents, apply onto a white basecoat.

Waterbased. The printing process used in this catalogue can not do justice to these bright colours but please ask our sales staff for a Rosco colour card. Coverage 8-9 square metres per litre.

See page 2.86 for Luminous Tapes and page 1.14 for Coloured Glow Paints.

ROSCO PRIMING PRODUCTS

Tough Prime A unique water based primer with special adhesion properties which allows it to bond onto hard to prime materials, including PVC pipe, aluminium and plastics, as well as muslin,

wood and foam core. Dries to a tough, durable coating that can be over painted. Although touch dry in half an hour, this paint will require between 24 and 48 hours to fully cure to its maximum strength. Suitable for indoor and outdoor use. Coverage 9-10 square metres per litre.

| Tough Prime | code | 3.79L | 18.95L |
|-------------------|----------|--------|---------|
| Tough Prime Black | ROS*6055 | £44.50 | £183.00 |
| Tough Prime White | ROS*6045 | £44.50 | £183.00 |
| | | [3] | [6] |

Neutral Base An acrylic binder with no pigment, for use when paint has been diluted with water, to increase adhesion. It is especially useful with heavily diluted supersaturated paints being used on difficult surfaces. Add it to Rosco paint when painting items such as door handles. Coverage 8-10 square metres per litre.

| Neutral Base | code | 1L | 5L |
|--------------|----------|--------|--------|
| | ROS*6001 | £10.75 | £41.95 |
| | | [1] | [5] |

Other Rosco Priming Products

White Base is ideal for priming canvas cloths as it remains supple, can be heavily diluted for wash effects or diluted less to obliterate old scenic paint. See page 1.02 for full details.

Crystal Gel is not really a primer but it sticks like mad to almost anything including tricky surfaces such as polycarbonate sheet. It can be dyed with waterbased dyes or food colouring or mixed with glitter to produce a tough interesting effect. See page 1.38 for full details

Colorcoat Flat Black is a great alternative to etch primer when painting steelwork. Being waterbased there are none of those nasty fumes from solvent based paints. See page 1.05 for full details.

Flexcoat can be used to paint soft foams. It does not become brittle with age. Mix it with foam granules for a great soft texture effect. See page 1.37 for full details.
