

Safety Bonds

Used as a fail-safe should the primary suspension fixing fail. Use for all suspended fixings, including lighting and sound equipment, particularly where items are suspended over people's heads. Try to ensure there is as little slack in the bond as possible as the loads given are based on static loads rather than dropped loads. A 3 mm Ø soft loop will pass through the hole in the Electro Kabuki. See Safety Lanyards for personal protection [pages 313 - 315]. See Small Tool Lanyards [page 316].
