The combination Polyproof Adhesive with hardener is approved by NTI, Norway, Otto-Graf Institut (FMPA), Germany, SKH/KOMO (DHBC No. 32389), Holland for the production of load-bearing timber structures.

Polyproof can be used in door production, lamination, finger jointing and other applications in the wood working industry, where there is demand for high water and weather resistance of the joints. The combination has short pressing times even at lower pressing temperatures.

**PRODUCT DESCRIPTION**

This super-professional, two part glue has been specially developed for waterproof exterior use and can stand continuous immersion in water. This glue is so waterproof - boat builders use it. Developed for the marine industry this is the only completely waterproof adhesive that will withstand continual immersion in water. For use externally where extreme weathering will take place. Arches for bridge work, concrete formers, marine craft construction, bonding of preservative treated timber..

Bonding of difficult timber i.e. teak and Iroko. Fire resistant to class 0. Used extensively for bonding difficult timbers such as teak and iroko where normal adhesives could fail. • structural timber • laminated roof members • timber in constant contact with water • timber in contact with the ground.

**DIRECTIONS FOR USE**

General Application for jointing To obtain the very best results the moisture content should be in the 12-14% range. Timber bought as kiln dried and stored under cover will present no problem.

Perhaps as important as the glue is the preparation the joining surfaces, especially for Oak and oily timbers, Teak, Iroko etc.

Timber direct from machining has a slightly glazed surface and the surface fibres are compressed by rollers etc, far from ideal and it is essential that the surfaces to be joined should be ridded of this unwanted smoothness.

Use a scouring plane (blade with fine points), hacksaw blade, or very coarse sandpaper. Plywood must be, treated in the same manner. Dust with a bristle brush, oily timbers should be degreased with methylated spirit. The faying area should be abraded as close to bonding as practically possible. As important as preparation, is working in the correct temperature and that means, within reason, as warm as possible, 20C is ideal. At higher temperatures the glue becomes much less viscous, easier to apply and penetrates the timber instead of laying on the surface, a better glue line results.

For the best results both surfaces of the joint should be glued. Use good quality brushes. Surfaces once glued should not be exposed to the air for any length of time. Do not over cramp; it's possible to starve a joint this way

A minimum of twenty minutes closed assembly time should be allowed before the application of
pressure.
Just bring the surfaces firmly into contact.
This will enable the glue to penetrate the surface fibres of the timber and avoid excessive squeeze out. The removal of surplus glue is best carried out when the glue has reached a jelly like stage, just before it goes off; it comes off readily and doesn’t stick to anything. If the glue sets hard it will prove very arduous to remove it and from awkward places almost impossible.

Application tools  
Roller spreader, ribbon spreader etc

Mixing ratio  
Adhesive   100 parts by weight
Hardener    15 parts by weight

The accuracy in the hardener amount shall be ±1 pbw.

Pot life  
Temperature of glue mix  10°C  15°C  20°C  25°C  30°C
Pot life in hours     4½  2¼  1¼  2/3  ½

When preparing large amounts of glue mixture, it is recommended to cool the glue to 10-15°C and after that add the hardener to extend the pot life.

Wood temperature  
The temperature should not be lower than 20°C.

Moisture content of the wood  
8 - 14%. For the production of laminated beams 10 - 12%.

Planing of the wood  
Newly planed surfaces give the best gluing result. For best result at laminated beam production the timber must be smoothly planed. For optimum bonding strength the planing should take place within 24 hours before gluing.

Glue spread  
For production of laminated beams a minimum glue spread of 400-450 g/m² single-sided is recommended. A reduction of the glue spread, e.g. at very short assembly times, is only allowed to be done together with the Polyvine Products Technical Advisors, depending on the production parameters for the production line in question. This optimization implies that the set parameters are followed and that a continuous control of the adhesion quality is made by means of delamination tests. At HF gluings a glue spread of 250-350 g/m² single-sided is recommended. At other applications: 150-300 g/m².

Difficult-to-glue wood or hardwood may require double spreading in amounts of 150-200 g/m² on each side.

Assembly time  
The assembly time is the time from the glue application until the pressure is applied. The assembly time can consist of closed and open assembly time. The assembly time is influenced by the amount of adhesive, temperature and moisture content of the wood. The pressure must be applied while the glue is still tacky.

Closed assembly time  
Closed assembly time in minutes with different glue spreading and temperatures.
Glue spread | 350 g/m² | 450 g/m²
--- | --- | ---

Temperature | 20°C | 25°C | 30°C | 20°C | 25°C | 30°C
--- | --- | --- | --- | --- | --- | ---

Pine
Minimum time | 5 | 4 | 3 | 7 | 6 | 4
Maximum time | 30 | 25 | 15 | 45 | 30 | 20

Spruce
Minimum time | 10 | 8 | 5 | 15 | 10 | 7
Maximum time | 30 | 25 | 15 | 45 | 30 | 20

Double spreading can increase the closed assembly time by 30-40%.

Open assembly time
The open assembly time is approximately half of the closed assembly time. When gluing hard wood it is favourable with long assembly times.

Pressing temperature
Soft wood can be glued at a joint temperature of 20°C. To be sure to obtain a good result heating of the glue joint to 30°C is recommended. When gluing hard wood the temperature of the glue joint must be at least 40°C. Constructions with tensions and hard woods requires at least 60°C to obtain adequate strength. Lowest pressing temperature has to be tried out. After the pressure is applied the heating can start.

Pressure
Minimum 0,5 MPa for soft wood
Minimum 1,0 MPa for hard wood

In laminated beam production:
Minimum 0,7 MPa for 33 mm lamellas
Minimum 0,9 MPa for 45 mm lamellas

According to DIN 1052/1-A1 the maximum allowed thickness of lamellae is 42 mm.

Pressing time
The pressing time depends on the temperature, the distance to the innermost glue joint, the glue spread, etc. The table below may be used as a guideline.

Glue joint temperature

<table>
<thead>
<tr>
<th>Glue joint temperature</th>
<th>Minimum time for curing at indicated glue joint temperature</th>
</tr>
</thead>
<tbody>
<tr>
<td>20°C</td>
<td>4 hours</td>
</tr>
<tr>
<td>30°C</td>
<td>2 hours</td>
</tr>
<tr>
<td>40°C</td>
<td>45 min</td>
</tr>
<tr>
<td>60°C</td>
<td>12 min</td>
</tr>
<tr>
<td>80°C</td>
<td>3 min</td>
</tr>
<tr>
<td>100°C</td>
<td>1 min</td>
</tr>
</tbody>
</table>

It is essential that an adequate heating time is added to the above indicated times.
FINGERJOINTING OF CONSTRUCTION TIMBER.

Application equipment

Profiled rollers, die.

Moisture content

Maximum 23%.

Glue spread

With single-sided application 250-300 g/m² and with application on both ends 125-150 g/m² on each end. The total surface is for a 15 mm profile 8 x the cross-section of the wood, for 20 mm profile 6,5 x the cross-section of the wood and with 28-32 mm profile 10 x the cross-section of the wood.

HF-heating

When fingerjointing lamellae for construction timber the temperature of the wood must be at least 15°C and the timber must be stored inhouse for at least 24 hours after fingerjointing. If HF-heating is used the fingerjointed lamellae can be taken out after 2 hours.

Assembly time

Maximum 90 sec.

Mixing proportions

Adhesive 100 pbw
Hardener 15 pbw

The accuracy when adding hardener should be ± 1 pbw.

Further processing

Planing of finger-jointed wood can be made 7-10 minutes after jointing provided that the planer is not pulling the wood. Full hardening of the finger joint is achieved after 2 hours if the temperature of the wood in the joint zone has been more than 60°C. If pressing is made at 20°C full hardening is achieved after 24 hours.

OTHER DATA

Properties of the bond-line  
Polyproof with hardener fulfils the requirements according to EN 301 (for glue type I and II, service classes 1,2,3), EN 391, EN 392 and DIN 68141.

Storage life  
Adhesive  6 months at 20°C in well closed packaging.  
Hardener  6 months at 20°C in well closed packaging.

If the packaging is left open when not in use the glue is susceptible to skin formation on the surface. To avoid this the packaging should be closed when not in use.

Temperature sensitivity  
Most suitable storage temperature is 15°C. The glue and the hardener are not harmed by freezing. If frozen, the adhesive and the hardener should be slowly thawed, after which the products are ready to use. Do not expose the glue or the hardener to temperatures above +30°C.

Moisture sensitivity  
None.

HEALTH AND SAFETY

Handling and cleaning instructions  
Information regarding health and safety is found in the Materials Safety Data Sheet. Make sure always to study this information carefully before taking any new product into consideration. Glue on skin is washed with soap and water. The tools are washed with tepid water before the glue has cured.

The information supplied herein is accurate to the best of our knowledge. Since conditions and methods are beyond our control, no warranty is expressed or implied. You are advised to access the suitability of the product on a test area before application.

4. First-aid measures

First-Aid measures

**Inhalation** If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention if symptoms appear.

**Ingestion** Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

**Skin Contact** In case of contact, immediately flush skin with plenty of water. Remove contaminated clothing and shoes. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention if symptoms appear.

**Eye Contact** Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention immediately.

5 Fire-fighting measures.

**Extinguishing Media**

Suitable  In case of fire, use water spray (fog), foam, dry chemical, or CO2.
Hazardous thermal (de)composition: carbon oxides (CO, CO2)

Products

Special fire-fighting procedures: Fire fighters should wear positive pressure self-contained breathing apparatus (SCBA) and full turnout gear.

Protection of fire-fighters: Be sure to use an approved/certified respirator or equivalent.

6. Accidental release measures

- **Personal precautions:** Splash goggles, Full suit, Vapor respirator, Boots, Gloves. A self-contained breathing apparatus should be used to avoid inhalation of the product.
- **Environmental precautions and clean-up methods:** Keep away from heat, Keep away from sources of ignition. Stop leak if without risk. Do not touch spilled material. Use water spray to reduce vapors. Absorb with an inert material and put the spilled material in an appropriate waste disposal. Prevent entry into sewers, basements or confined areas. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

7. Handling and storage

- **Handling:** Keep locked up. Keep away from heat. Keep away from sources of ignition. Ground all equipment containing material. Do not ingest. Do not breathe gas/fumes/vapor/spray. Avoid contact with skin. Wear suitable protective clothing. If ingested, seek medical advice immediately and show the container or the label.
- **Storage:** Keep container in a cool, well-ventilated area. Keep container tightly closed and sealed until ready for use. Avoid all possible sources of ignition (spark or flame). Store between -30 to 30°C (-22 to 86°F).

- **Packaging materials:** Use original container.

8. Exposure controls/personal protection

- **Engineering measures:** Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective occupational exposure limits. Ensure that eyewash stations and safety showers are proximal to the work-station location.
- **Hygiene measures:** Wash hands, forearms, and face thoroughly after handling compounds and before eating, smoking, using lavatory, and at the end of day.

</tbody>
</table>

- **Recommended monitoring procedures:**
- **Personal protective equipment**
  - Respiratory system: Vapor respirator. Wear appropriate respirator when ventilation is inadequate. (as filter B)
  - Skin and body: Protective Clothing
  - Hands: Butyl gloves, Neoprene gloves, Nitrile gloves. Always check with the manufacturer of the gloves if their quality fulfills the requirements for the chemical composition.
  - Eyes: Safety glasses with side shields.

To the best of our knowledge, the information contained herein is accurate. However, neither the above named supplier nor any of its subsidiaries assumes any liability whatsoever for the accuracy or completeness of the information contained herein. Final determination of suitability of any material is the sole responsibility of the user. All materials may present unknown hazards and should be used with caution. Although certain hazards are described herein, we cannot guarantee that these are the only hazards that exist.
SAFETY DATA SHEET
POLYPROOF RESIN

1. Identification of the substance/preparation and of the company/undertaking

1.1

Product name

POLYPROOF RESIN

Common/Trade name
Not available.
Chemical product name
phenol-resorcinol-formaldehyde resin
Molecular weight
Not applicable.
Chemical Family
Adhesive.
Code:
APP670
Material Uses:
Adhesive;

1.2

COMPANY DETAILS

Manufacturer POLYVINE LIMITED
Severn Distribution Park
Sharpness,
Berkeley,
Gloucestershire.
GL13 9UQ United Kingdom
Telephone No.0845 017 1671
International +44 845 017 1671
Fax: 0845 017 1670
Email info@polyvine.co.uk

1.3

Date of printing 01/06/2008
Date of issue 30/05/2008
Date of Previous Issue 20/08/2006
Prepared by: Mike Sherman
2. Composition / information on ingredients

See Section 16 for the full text of the R Phrases declared above

* Occupational Exposure Limit(s), if available, are listed in section 8

3. Hazards identification

The preparation is classified as dangerous according to Directive 1999/45/EC and its amendments.

Classification Xn: R21/22
Xi: R36/38
R21/22- Harmful in contact with skin and if swallowed.
R36/38- Irritating to eyes and skin.

Effects and symptoms

Eye Contact Hazardous in case of eye contact (irritant).

Aggravating conditions Repeated or prolonged exposure is not known to aggravate medical condition

4. First-aid measures

First-Aid measures

Inhalation If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention if symptoms appear.

Ingestion Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

Skin Contact In case of contact, immediately flush skin with plenty of water. Remove contaminated clothing and shoes. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention if symptoms appear.

Eye Contact Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Cold water may be used. Get medical attention.

5 Fire-fighting measures.

Extinguishing Media

Suitable In case of fire, use water spray (fog), foam, dry chemical, or CO2.
Hazardous thermal (de)composition carbon oxides (CO, CO2)

Products

Special fire-fighting procedures Fire fighters should wear positive pressure self-contained breathing apparatus (SCBA) and full turnout gear.

Protection of fire-fighters Be sure to use an approved/certified respirator or equivalent.

6. Accidental release measures

Environmental Precautions and Clean-up Methods Stop leak if without risk. Prevent entry into sewers, basements or confined areas. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

Note: See section 8 for personal protective equipment and section 13 for waste disposal.

7. Handling and storage

Storage Keep container in a cool, well-ventilated area. Keep container tightly closed and sealed until ready for use.

Handling Do not breathe gas/fumes/ vapour/spray. Wear suitable protective clothing, gloves and eye/face protection. If swallowed, seek medical advice immediately and show this container or label.

Packaging materials Recommended use Use original container.

8. Exposure controls/personal protection

Engineering measures Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapours below their respective occupational exposure limits. Ensure that eyewash stations and safety showers are proximal to the workstation location.

Hygiene measures Wash hands, forearms, and face thoroughly after handling compounds and before eating, smoking,

Ingredient Name Occupational Exposure Limits
Ethanol ACGIH (United States).
TWA: 1000 ppm
TWA: 1000 ppm 8 hour(s).
TWA: 1880 mg/m³ 8 hour(s).
ACGIH TLV (United States, 2000). Notes: 1996 Adoption Refers to Appendix A -- Carcinogens.
TWA: 1880 mg/m³ 8 hour(s).
TWA: 1000 ppm 8 hour(s).
TWA: 2 ppm 8 hour(s).
TWA: 7.8 mg/m³ 8 hour(s).
80/1107/EEC (Europe, 2000). Skin Notes: Indicative
TWA: 7.8 mg/m³ 8 hour(s).
TWA: 2 ppm 8 hour(s).
Sodium hydroxide ACGIH TLV (United States, 2000).
CEIL: 2 mg/m³.
Recommended monitoring procedures

Personal protective equipment

Respiratory system : Vapour respirator. as filter A2 Wear appropriate respirator when ventilation is inadequate.

Skin and body Overalls buttoned to the neck and wrist.

Hands Neoprene gloves. Nitrile gloves. Always check with the manufacturer of the gloves if their quality fulfils the requirements for the chemical composition.

Eyes Safety glasses with side shields.
9. Physical and chemical properties

Physical state Liquid

Melting Point May start to solidify at -113.8°C (-172.9°F) based on data for Ethanol.

Boiling Point The lowest known value is 78.4°C (173.1°F) (Ethanol).

Vapour Pressure The highest known value is 0.8 kPa (5.8 mmHg) (at 20°C) (Ethanol).

Density 1.115 g/cm³

Vapour Density The highest known value is 1.6 (Air = 1) (Ethanol).

Solubility Easily soluble in methanol, diethyl ether. Soluble in hot water. Partially soluble in cold water.

Odour Threshold The lowest known value is 180 ppm (Ethanol)

Odour Not available.

PH 7.9 to 8.15 (Conc. (% w/w): 100) [Basic.]

Colour Brown. (Dark.)

Evaporation rate (butyl acetate = 1) 1.7 (Ethanol) compared to (n-BUTYL ACETATE=1)

Auto ignition temperature The lowest known value is 398.9°C (750°F) (Ethanol).

Flash point Closed cup: 70°C (158°F).

Viscosity Dynamic: 8000 to 11000 cP

Lower explosion limit The greatest known range is LOWER: 4.3% UPPER: 19% (Ethanol)

Explosive properties Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Oxidizing Properties Not available.

10. Stability and reactivity

Stability The product is stable.

Hazardous Decomposition Products carbon oxides (CO, CO2)

11. Toxicological information

Acute toxicity
**Local effects**

**Skin irritation** Hazardous in case of skin contact (irritant).

**Eye irritation** Hazardous in case of eye contact (irritant).

**Chronic toxicity** Repeated or prolonged exposure is not known to aggravate medical condition.

**Specific effects**

**Carcinogenic Effects** Classified None. by NIOSH [Potassium hydroxide]. Classified None. by NIOSH [Ethanol]. Classified A4 (Not classifiable for human or animal.) by ACGIH [Ethanol]. Classified None. by NIOSH [Sodium hydroxide]. Classified None. by NIOSH [Phenol]. Classified A4 (Not classifiable for human or animal.) by ACGIH, 3 (Not classifiable for human.) by IARC [Phenol].

**Reproduction toxicity** Classified Reproductive system/toxin/female, Reproductive system/toxin/male [PROVEN] [Ethanol].

**Developmental and Teratogenic Effects**

**GENERAL INFORMATION :**
The product contains phenol-resorcinol-formaldehyde resin, unreacted phenol and resorcinol. Vapours may be irritating to respiratory tract and eyes. Inhalation may cause nose and throat irritation, coughing, hoarseness, lachrymation, headache and nausea. The liquid is irritating to skin and may cause burns. Skin contact may cause smarting pain, loss of pain sensation and later wounds. If the adhesive is not removed at once, there is a risk of absorption of phenol and resorcinol through skin, causing i.a systemic effects. Prolonged or repeated contact with adhesive/hardener mixture may cause hardening and cracking of skin and sensitization. Contact with eyes causes intense pain. Great risk of burns and remaining eye damage. Ingestion may cause burns with intense pain in mouth and throat, stomach pains, vomiting and systemic effects.

**12 Ecological information.**

**13. Disposal considerations**

**Methods of disposal ; Waste of residues ; Contaminated packaging**

Type: Hazardous chemical waste.
Location: not available
Classification: not available
Disposal: Waste must be disposed of in accordance with federal, state and local environmental control regulations.
Storage: not available
Recycling: not available
Instructions for emptying of different packages are available.
Waste Classification: Not applicable.

European Waste Catalogue (EWC): 080409*

Hazardous Waste: The classification of the product may meet the criteria for a hazardous waste

15. Regulatory information

EU Regulations

Hazard symbol(s)

R21/22- Harmful in contact with skin and if swallowed.
R36/38- Irritating to eyes and skin.

Safety Phrases
S23- Do not breathe vapour.
S26- In case of contact with eyes, rinse immediately with plenty of water and seek medical advice.
S28- After contact with skin, wash immediately with plenty of water.
SS1- Use only in well-ventilated areas.

Contains Phenol 203-632-7
Resorcinol 203-585-2

Product Use: Classification and labelling have been performed according to EU directives 67/548/EEC, 1999/45/EC including amendments and the intended use.
- Industrial applications.

16. Other information

Full text of R-Phrases with no.
Appearing in Section 2 - Europe
R11- Highly flammable.
R24/25- Toxic in contact with skin and if swallowed.
R21/22- Harmful in contact with skin and if swallowed.
R22- Harmful if swallowed.
R34- Causes burns.
R35- Causes severe burns.
R36/38- Irritating to eyes and skin.
R50- Very toxic to aquatic organisms.

Text of classifications appearing in Section 2 – Europe

F - Highly flammable
T - Toxic
C - Corrosive
Xn - Harmful
Xi - Irritant
N - Dangerous for the environment.
