FLAME PASTE

Flame Paste [Angel Fire]

A flammable paste that can be applied to a suitable surface. It burns with an even orange flame and a small amount of paste burns for a surprisingly long time. The paste is virtually invisible when applied. The paste can be used anywhere a small controllable flame is needed. This paste can be used on stage to simulate a camp fire without the use of flammable liquids or gas. Flame Paste is best extinguished by smothering the container and starving the paste of oxygen. The flame can also be extinguished by blowing the flame out.
