Nuisance Masks

The Health and Safety Executive warns people not to use "nuisance" dust masks if they are working with harmful dusts. They perform poorly and do not meet basic health and safety requirements. In line with the recommendation of the HSE, Flints does not have these masks listed here as part of the HSE campaign to reduce occupational asthma which affects between 1,500 and 3,000 people every year.

Choosing the Correct Respirator

Our respirators are divided into three categories identified by the colour of the strap or the printing on the valve / respirator:

FFP1 Identification colour:

Low level fine dust/oil- or water-based mists [hand sanding, drilling and cutting]. Should reduce exposure by a factor of 4.

FFP2 Identification colour:

Moderate level fine dust/oil- or water-based mists [plastering, cement, sanding and certain wood dust]. Should reduce exposure by a factor of 10.

FFP3 Identification colour:

Higher level fine dust/oil- or water-based mists [certain pharmaceutical powders, biological agents and fibres]. Should reduce exposure by a factor of 20.
