Flamebar Health & Safety Labelling Update

The Flamebar products; BM027 Flamebar N5, BM030 Flamebar PE6, BM031 Flamebar S3 & BM049 Flamebar N5 Double Strength contain the flame retardant chemical Ammonium Bromide.

On May 23 2022 the EU has issued an ATP to amend Annex VI to the CLP Regulation on Classification, Labelling and Packaging of Substances and Mixtures. This amendment will apply from November 23, 2023.

Ammonium Bromide (CAS# 12124-97-9 - EC# 235-183-8) is reclassified and products using it will be prohibited for sale to and use by the general public. Products containing it will be restricted to professional users only.

If you buy any of our Flamebar range for onward sales, either directly or through your website, you must ensure that the person buying these products is a professional user before allowing the sale.

Our plan is to update the labelling on our Flamebar products over the next 3-4 months. This then will allow 12 months for the supply chain to be cleared of stock with the current Health and Safety labelling.

At the end of this update are 2 pages that show the current Health and Safety and the New Health and Safety for the products in this range.
